

ABSTRACT OF THE DISCLOSURE

There is provided a data processing system comprising:

5 a processor operable in a plurality of modes and either a secure domain or a non-secure domain including:

at least one secure mode being a mode in said secure domain; and

at least one non-secure mode being a mode in said non-secure domain;

wherein

10 when said processor is executing a program in a secure mode said program has access to secure data which is not accessible when said processor is operating in a non-secure mode;

said processor is responsive to one or more exception conditions for triggering exception processing; and

15 said processor being responsive to one or more parameters specifying which of said exceptions should be handled by a secure mode exception handler executing in a secure mode and which of said exceptions should be handled by an exception handler executing in a mode within a current one of said secure domain and said non-secure domain when that exception occurs.
